Experience

EMD Serono Inc. Sr. Director/Director of Bioinformatics (September 2021 - Present / March 2014 - August 2021) Led Bioinformatics group supporting Immunology and Immuno-Oncology at all pipeline stages. Led/supervised predictive biomarker research for Avelumab, Bintrafusp Alfa, Atacicept, Evobrutinib, Empatoran. Provided and managed bioinformatics support for a major target discovery effort for Lupus. Discovery and development project support for target identification, model selection, and biomarker identification. Led "Bedside to Bench" R&D strategic initiative. Developed practices and community around new 'omics + data science platform. Led applications of machine learning across portfolio - text mining, classification, neural nets. Supervised adoption of single-cell RNASeq processing, analysis, and visualization.

EMD Serono Inc. Associate Director of Bioinformatics (December 2013 - March 2014) Specialized in next-generation sequencing. Designed and implemented company's first cloud-based system for scientific computation using AWS. Supervised and supported development of custom sequencing protocols for antibody library development.

Pathogenica, Inc. VP of Bioinformatics (May 2011 - October 2013) Responsible for design and implementation of Pathogenica's computational infrastructure including capture probe design, sequencing data analysis pipelines for internal use, and Ion Torrent PGM plugin for customer use. Trained machine learning models on high throughput sequencing to optimize probe design. Worked with team to achieve CE mark for HAI BioDetection kit and software. Inventor or co-inventor for seven patent applications.

Postdoctoral Associate, Computational Genomics Research Group and SysCODE Project (June 2009 - April 2011) Studies directed differentiation of embryonic stem cells into pancreatic cells. Developed genetic regulatory network algorithms and tools for ChIP-Seq and DNase-seq.

Graduate Student, Computational Genomics Research Group, MIT (January 2003 - May 2009) Research focused on ChIP-Chip data, microarray design, genetic regulatory network discovery, and computational tools for biology collaborators. Developed a novel method to identify transcription factor binding sites (Joint Binding Deconvolution). Expanded research group's computational infrastructure to include a compute cluster and Oracle databases for microarray and short-read sequencing data. Thesis project required experiment design and computational analysis to develop a novel technique to detect insertions, deletions, and inversions in nucleic acid samples.

Whitehead Institute Center for Genome Research (January 1998 - August 2002) Implemented a variety of laboratory information management and analysis systems for the Functional

Genomics Group. Developed programming tools for rapid development of workflow systems as Master of Engineering thesis project. Database development for SNP discovery project.

Education

Ph.D. Computer Science. MIT, June 2009. *Ruler Arrays Detect Genomic Insertions and Deletions*. Supervised by Profs. David Gifford, Gerry Fink, Tommi Jaakkola, and Ernest Fraenkel.

M.Eng. Computer Science. MIT, June 2002. *Code Versioning in a Workflow Management System*. Supervised by Prof. Michael Ernst.

S.B. Computer Science. MIT, June 2001.

Skills

- Developing and leading computational groups - hiring, onboarding, training, development, collaboration across R&D functions
- Computational biology methods for gene expression analysis, including alignment, QC, differential expression, signature generation, patient subgroup identification, and biomarker selection
- Data strategy and infrastructure for R&D including FAIR principle implementation and self-service analytics/visualization
- Extensive R, Java, Python, shell scripting, Scheme, Perl, and SQL programming experience
- Experience with the design and implementation of scalable scientific computing systems using Amazon Web Services.
- Assay development and regulatory approval
- Twenty-five years experience with biological and genomic datasets
- Extensive Linux, Unix, and Oracle administration experience
- Experience with git, GitLab, svn, CVS, RCS, make, and other software engineering tools.

Research Interests

- Application of machine learning to pharmaceutical development and biology
- Genome plasticity: evolution and diversity within an individual
- Mechanisms of auto-immune disease to understand routes to cure vs treatment of symptoms
- Development of new uses for high throughput sequencing and single-cell technologies
